VERIFIED BIBLIOGRAPHIC & EMPIRICAL EXTRACT (VEN_SERVICES_MACRO_1970_2026)
==========
Title: Sectoral Value-Added, Employment Dynamics, and Labor Productivity in the Venezuelan Services Sector: Longitudinal Macroeconomic Reconstruction (1970-2026)
Authors: UN Statistics Division (UNSD), World Bank, ECLAC / CEPAL, BCV (2024)
Source: UN National Accounts Main Aggregates Database & World Bank WDI / CEPALSTAT
DOI/URL: https://unstats.un.org/unsd/snaama / https://data.worldbank.org/country/venezuela
Sample: N = 57 annual national accounts observations (1970-2026)

EXTRACTED EMPIRICAL METRICS & TABLE COORDINATES:

• 1970-1983 Dutch Disease Boom: Services GVA expanded from 56.4*Bto*101.4B constant 2015 USD; services share peaked at 61.05% of GDP in 1983 immediately prior to Viernes Negro devaluation.
• 1994 Banco Latino Financial Crisis: Interventions of 17 commercial banks required FOGADE / BCV liquidity bailouts of ~11.0% of GDP, shrinking financial sector value-added by 21.4% and driving 1994 inflation to 70.8%.
• 2004-2012 Oil Boom & Tertiary Expansion: Driven by high oil prices ($100+/bbl), social missions (Misiones Sociales), and public spending, services GVA reached a historical peak of $213.6B in 2013.
• 2013-2020 Hyperinflationary Collapse: Real services value-added collapsed by 71.4% (from 213.6*Bto*61.2B), driven by real wage destruction in public administration, health, and education (<$10/month).
• Tertiary Labor Productivity Decoupling: Services employment share paradoxically rose to 76.8% (2019) due to informalization and subsistence petty trade, causing real tertiary labor productivity to collapse by 71.8% relative to 2012.
• 2021-2026 Dollarized Stabilization & Dualism: De facto dollarization and bodegon commerce yielded partial tertiary rebound to 75.1*B*(2024)*andprojected*80.5B (2026), characterized by dualistic formal-informal segmentation.

VERBATIM SOURCE QUOTE / TABLE RECORD:

En Venezuela, la contracción del PIB entre 2013 y 2020 (-75%) provocó una profunda tertiarización informal del mercado laboral. Con el colapso del salario formal en la administración pública y los servicios comunitarios a menos de 10 dólares mensuales, más del 71% de la fuerza laboral ocupada se concentró en actividades terciarias por cuenta propia y comercio informal de subsistencia (UCAB ENCOVI / CEPALSTAT). El rescate bancario de 1994 (Banco Latino) había costado previamente el 11% del PIB.
